Risk Definitions

R-Squared is a measure of directional risk. R-Squared measures the relative closeness of a manager's performance to that of a specific benchmark. The higher the R-Squared, the higher the correlation between the two sets of performance numbers. A higher R-Squared is generally desirable.

Tracking Error is a a measure of active management risk. Tracking Error indicates how closely a manager's returns are following or "tracking" the benchmark's returns. A lower Tracking Error is generally desirable.

Standard Deviation is a measure of total volatility. The more a portfolio's returns vary from its average returns, the higher the portfolio's Standard Deviation. The lower the Standard Deviation, the lower the uncertainty or risk. A lower Standard Deviation is generally desirable.

Sharpe Ratio is a measure of risk-adjusted return. Sharpe Ratio measures EXCESS return (return above the risk free Treasury rate) per unit of VOLATILITY (Standard Deviation). The higher the Sharpe Ratio the better the manager's risk-adjusted return.

Beta is a relative measure of systematic risk. An indication of a portfolio's sensitivity to fluctuations in a particular market. A lower Beta is normally considered to be less risky.

Alpha is a measure of manager contribution. Alpha is the EXCESS return above the benchmark, taking into consideration the portfolio's SYSTEMATIC RISK (Beta). A higher Alpha is generally desirable.

Market Capture is a relative measure of upside/downside risk. A measure of how well the manager has been able to limit losses or particiapte in gains compared to the benchmark.

* ***Style Tilt*** *measures the degree to which a manager has invested the portfolio towards value or growth (-1.0.. .0...+1.0). The more Value orientated the portfolio the closer the Style Tilt will be to -1.0 . The more Growth orientated the closer the number will be to +1.0. Portfolios with Style Tilts closer to zero would be considered more Core orientated. The maximum domestic style overweight / underweight is in relation to the Russell 3000 index.* ***Impact YTD*** *measures how the account's style allocation affected the domestic equity performance over the current calendar year relative to the Russell 3000 Index.*

*The **Regional Exposure** provides a broad breakdown of an investment's geographic exposure. Morningstar folds some 200 countries into three super geographic regions of the Americas, Greater Europe (including ME/Africa) and Greater Asia. They are based on the following three criteria: Common economic/currency denominator; Sufficient population of publicly traded equities; Logistics and geography. The maximum international allocation overweight / underweight is in relation to the MSCI ACWxUS Index. **Impact YTD** measures how the account's regional allocation affected the international performance over the current calendar year relative to the MSCI ACWxUS Index.*

Cash Flow Definitions

All cash flow information reflected on this report is based upon the net result of specific transactions that have been itemized on the custodian statement.

Expenses	Any money debited or credited directly to the account by any third party, such as a custodian, money manager or consultant, excluding mutual fund fees.
Contributions	Any money or securities deposited by the client or any third party.
Distributions	Any money paid out of the account, other than an expense or tax payment.
Tax-Payments	Any tax debited or credited, such as federal, state, local or foreign taxes.
Sub-Account Transfers	Any money or securities transferred between sub-accounts or between managed and unmanaged assets.
Net Transaction Activity	Any security based transaction involving cash, including but not limited to purchases, sales and security reorganizations.
